

Graduate student opportunities opening in agroecosystems, climate change and biodiversity conservation.

Vasseur's Ecology Lab is offering funded graduate student (Master and possibly PhD) positions in the Departments of Biological Sciences for current funded projects.

A background in ecology will be required, ideally with experience in doing field work, species identification/ biodiversity, and biostatistics. In one project, the successful candidates will conduct research in ecological assessment of plant and invertebrate species diversity in agroecosystems, mainly organic vineyards at the landscape level.

Brock University is suitably located in the Niagara region where experiments can be conducted easily in controlled and operating conditions. The department is very well equipped for field experiments, analytical facilities, and greenhouses (as well as research experimental plots on Brock research farm).

Any students interested to apply can do so immediately and positions will remain open until suitable candidates are found.

All qualified candidates are encouraged to apply; however, the positions are currently limited to Canadians and permanent residents. Brock University is actively committed to diversity and the principles of Employment Equity and invites applications from all qualified candidates. Women, Aboriginal peoples, members of visible minorities, and people with disabilities are especially encouraged to apply and to voluntarily self-identify as a member of a designated group as part of their application.

Please submit a letter of application with a summary of research accomplishments, a CV, unofficial transcript, and contact information for three academic references to: Liette Vasseur, Biology, email: lvasseur@brocku.ca.
